

Fireball!

Game Art Bible

Overview

“Team up with or against your friends in the Baby Dragons’ Playgrounds as you Fireball critters for the highest score in this action-packed party game!”

Fireball! is a multiplayer party game where players control cute baby dragons trying to kill cute little critters. We are using a cutesy, simplistic, and colourful visual style in order to best relay the cute and playful concept, while also taking advantage of it for a humorous contrast with the violent gameplay.

To make the experience more dynamic and hectic, we will have various powerups and a constant stream of critters. At the end of rounds, we will further add to the humour with gag achievements.

Character Style Guide

The idea behind the dragon designs is to have them be recognisably young as well as cute and cartoonish.

Environment Style Guide

The environments are cartoony and simplistic. Environment assets lean toward being more angular than perfectly smooth.

Game Moodboard

The game is colourful and ostensibly family-friendly, but also slightly morbid. It's a hectic and violent experience while maintaining a cute exterior.
